Professional Summary

Outcome-driven QA Engineer with **6+** years of experience in both **Manual Testing and API Testing** across Web, Mobile, and API platforms. Skilled in designing test plans, executing comprehensive test cases, and ensuring robust defect tracking using JIRA. Strong understanding of SDLC and Agile methodologies, with a proven ability to deliver quality results in a fast-paced environment.

Technical Skills

- **Web Apps Testing :** Have a good experience in testing web applications from different domains (**Ed Tech** || **FinTech** || **Health Care Systems**).
- **Mobile Testing:** iOS & Android (Native & Hybrid Apps).
- **API Testing**: Postman.
- **Test Planning :** Have a good hands on plan and execute the QA strategies from the QA Perspective of a Project.
- **Test Case Writing :** Have a good experience of writing efficient test cases for a Project as per its business logic.
- **Testing Types :** Localization Testing, Accessibility Testing, Functional Testing, Integration Testing, Smoke Testing, Sanity Testing.
- **Bug Tracking Tools**: ASANA, JIRA, TRELLO.
- **Project Management:** Sprint QA, Release Notes, Project Documentation.

Work Experience

QA Engineer **Oct 2019 - Present**

Rubico Tech | Haridwar, Uttarakhand

- Designed and authored comprehensive **Test Plans** and **Test Cases** based on details of the project's requirements across diverse domains.
- **Performed API testing** using **Postman** validating request/response structures, status codes, and data integrity.
- **Executed cross-browser and cross-device testing** using platforms like **BrowserStack** ensuring consistent behavior across environments.
- Conducted **Localization and Accessibility Testing** to ensure product usability for global and inclusive audiences.
- Reviewed and updated **release notes**, contributed to **project documentation**, and participated in **sprint planning** and **retrospectives**.
- **Mentored junior QA engineers** in automation best practices and test strategy development, and conducted **over 10+ technical interviews** to assess new candidates.
- Supported **UAT (User Acceptance Testing)** by coordinating with stakeholders and ensuring timely sign-offs.

KEY PROJECTS

PathWD : A Complete Business Solution :: **Lead QA :: Mar 2024 - Present**

PATH is a unified business operations platform which provides Dynamic Workflow and manages the complete lifecycle of customers, orders, installations, services, and warehouse activities. It streamlines CRM and sales, order processing, logistics, installation and service execution, and inventory movement through automation, digital workflows, and real-time tracking. With built-in barcode scanning, warehouse control, and reporting, PATH eliminates manual data entry while providing full operational visibility from lead creation to project completion.

Project Tech Stack - NestJS-Micro-Services and Angular.

QA Tools & Techniques Used - Datadog**,** Postman, Test Cases, Smoke Testing, Regression Testing.

My Roles and Responsibilities -

- Reviewing the frequently used **Dynamic Workflows** like Send Bulk Email to Vendors, E-signing the approved bills, Uploading and attaching Document to a record, Post a bulk summary Notes for delivered Product and Notification Services as per task assigned to different users of the System.
- Performed API testing using **Postman**, mainly in order to identify which workflow step is failing while executing the certain set of steps.
- Used **Datadog** to monitor API response times, error rates (4xx/5xx), and failed requests, while validating dependent service triggers and verifying alerts for service outages, job failures, and queue delays during testing.
- Follow up with the Other QA team members before delivering features to the product owner.

Rev79 : A Three Strands Project :: **Lead QA :: Jan 2020 -Mar 2025**

Rev79 is a Learning Management System and PWA-enabled application and the **Project is live in more than 20+ countries.**

Project Tech Stack - Ruby on Rails (Backend), TypeScript (Client Backend), Vue.js (Frontend), DevExpress (UI Library), i18n (Localization).

QA Tools & Techniques Used - Postman, Test Cases, Smoke Testing, Regression Testing.

My Roles and Responsibilities -

- Designed and executed manual and automated test cases using Selenium WebDriver, Java, TestNG, and Extent Reports to validate core application workflows.
- Performed API testing using Postman, collaborating closely with backend teams to identify issues such as incorrect status codes, data mismatches, and error handling flaws.
- Conducted localization testing for multiple languages (Portuguese, Indonesian, Spanish, and French), ensuring accurate translation and UI consistency across regions.
- Led post-deployment regression and daily automated smoke tests to maintain build stability and verified bug fixes during UAT cycles.

Gold Athletics :: **Lead QA :: July 2024 -Present**

Gold Athletics is a fundraising platform supporting school and team initiatives through web and mobile solutions.

Project Tech Stack - Admin Panel (Laravel - Backend || Vuejs - Frontend), Flutter (iOS & Android Apps).

QA Tools & Techniques Used - Postman, Test Cases, Smoke Testing, Regression Testing.

My Roles and Responsibilities -

- Tested Android and iOS mobile applications after new feature integration.
- Conducted API testing using Postman for both Admin and Mobile features.
- Wrote and executed detailed test cases for mobile and admin workflows.
- Performed smoke and regression testing across mobile and admin modules.
- Reported and tracked defects to ensure timely resolution and release readiness.

Miscellaneous Projects

Paxster - Norwegian electric micro-vehicle project focused on real-time data accuracy via smart chip integration in order to send and receive real time data to update mobile apps (iOS & Android) interfaces for assigned Vehicles.

My Roles and Responsibilities - Performed API and UI testing for features like location tracking, battery status, load/unload events, and service alerts—ensuring reliable data sync across app interfaces and production environments.

TAND App - A Flutter-based mobile app for detecting **Medical conditions of Tuberous Sclerosis Complex Associated Neuropsychiatric Disorders (TAND)**, live in 16 countries and backed by a **WHO-region-spanning consortium of 35 members.**

My Roles and Responsibilities - Developed and executed 300+ positive and negative test scenarios to validate scientific algorithms, ensuring clinical accuracy and reliable performance across diverse international user bases.
